Professional Summary

Results-driven Computer Science student specializing in AI, Cybersecurity, and Data Science with expertise in penetration testing, threat analysis, and machine learning. Proven track record of developing innovative solutions including automated security tools and intelligent task management systems. Strong foundation in network security, web application security, and forensic investigation. Core competencies include Python development, cybersecurity analysis, ML algorithms, and database management. Seeking opportunities in cybersecurity, AI development, or data science roles.

Education

Bachelor of Technology in Artificial Intelligence and Data Science, Shah and Anchor Kutchhi Engineering College June 2022 – June 2026

- Cumulative Grade Point Average: 7.0/10.0 (Current through Semester V)
- **Relevant Coursework:** Computer Architecture, Computer Networks, Computational Theory, Data Structures and Algorithms, Machine Learning, Database Management Systems, Operating Systems, Cybersecurity Fundamentals

Professional Experience

Red Team Security Analyst, DeepCytes Cyber Lab June 2024 – August 2024

- Developed automated penetration testing scripts using Python, reducing manual testing time by 60% and improving vulnerability detection accuracy; Conducted comprehensive security assessments and threat modeling for enterprise systems, identifying critical vulnerabilities and recommending mitigation strategies

AI Cybersecurity Analyst, DeepCytes Cyber Lab January 2025 – June 2025

- Architected enterprise-level Intelligent Task Manager system using ML algorithms for real-time threat detection, achieving 95% accuracy in identifying malicious processes; Developed comprehensive Windows application for continuous system behavior monitoring and proactive threat mitigation

Generative AI Research Intern, National Stock Exchange of India July 2025 - September 2025

- Spearheaded development of multilingual web translation system using advanced language models and neural machine translation techniques; Designed and deployed custom fine-tuned LLMs for financial content translation, ensuring regulatory compliance and data security standards

Technical Projects

Neural Style Transfer using CycleGAN Architecture | Team Size: 4 (In Progress) [GitHub Repository](#)

- Developing advanced image-to-image translation system using Cycle-Consistent Generative Adversarial Networks (CycleGAN) for artistic style transfer without paired training data; Implementing deep learning architecture with TensorFlow/Keras and custom loss functions, utilizing OpenCV for preprocessing and conducting extensive model evaluation using PSNR/SSIM metrics

IndicTrans2 Translator for NSE Website | Real-time Multilingual Translation

Technologies: Node.js, FastAPI, Python, IndicTrans2, SQLite, Cython, Transformers, Express.js

- Architected enterprise-level real-time translation system using IndicTrans2 AI model for National Stock Exchange website, supporting all 22 scheduled Indian languages; Developed scalable Node.js streaming proxy with SQLite caching and FastAPI backend, achieving 95% translation accuracy and 60% reduction in response time through intelligent cache optimization; Eliminated NSE's annual outsourcing costs of 75 lakhs by providing in-house translation capabilities, resulting in complete cost elimination while maintaining high-quality multilingual content delivery

Technical Skills

Programming Languages: Python, C, JavaScript, SQL, HTML/CSS

Technologies & Frameworks: TensorFlow, Keras, OpenCV, Scikit-learn, NumPy, Pandas, PostgreSQL, Git, Jupyter Notebook

Cybersecurity Tools: Wireshark, Metasploit, Nmap, Burp Suite, Volatility, Autopsy, FTK Imager

Areas of Expertise: Machine Learning, Deep Learning, Network Security, Web Application Security
